RE: Pilot Study  
SMA 4 – Former Chemical Plant  
EPA ID Number: ALD 000 828 848  
RCRA Docket Number: RCRA-04-2016-4250

Dear Mr. Hardegree:

Bluestone Coke, LLC is writing in order to provide an update to our previous letter concerning the ISCO Pilot Study from the approved CMI Work Plan.

Bluestone Coke has been in contact and working with REGENESIS Remediation Services (Regenesis) to provide for the *in situ* chemical oxidation (ISCO) treatment utilizing RegenOx® PetroCleanze™ to remediate a dissolved plume containing petroleum hydrocarbons at the Site located in Birmingham, AL. In my last update, Bluestone Coke had signed a contract and paid for the product needed for Event 1. Today, I am able to state that we have made payment for the application/injection of the product for Event 1. Regenesis is in the process of determining physical dates that this action can take place.

I will provide further updates when we have reached additional milestones in the future. If you have any questions concerning this matter, please contact me at (205) 808-7972 or [dwiggins@bluestonecoke.com](mailto:dwiggin@bluestonecoke.com).

Sincerely,

Don Wiggins, Representative of the Company  
Bluestone Coke, LLC
